System wiring

Match Remote Control

Use power restart to match the LED driver and RF remote.
The LED driver of different light types matches the RF remote of corresponding light type.

Match:

Switch off the power, then switch on power again,
immediately short press on/off key (single zone remote) or zone key (multiple zone remote) 3 times on the remote.
The light blinks 3 times means match is successful.

Delete:

Switch off the power, then switch on power again,
immediately short press on/off key (single zone remote) or zone key (multiple zone remote) 5 times on the remote.
The light blinks 5 times means all matched remotes were deleted.

RGB/RGBW Dynamic mode list

No.	Name	No.	Name
1	RGB jump	6	RGB fade in and out
2	RGB smooth	7	Red fade in and out
3	6 color jump	8	Green fade in and out
4	6 color smooth	9	Blue fade in and out
5	Yellow cyan purple smooth	10	White fade in and out

Application notes

1. All LED drivers in the same zone.

RF remote

Auto-transmitting: One LED driver can transmit the signals from the remote to another LED driver within 30m, as long as there is a LED driver within 30m, the remote control distance can be limitless.

Auto-synchronization: Multiple LED drivers within 30m distance can work synchronously when they are controlled by the same remote, under same dynamic mode and with same speed.

LED driver placement may offer up to 30m communication distance. Metals and other metal materials will reduce the range. Strong signal sources such as WiFi routers and microwave ovens will affect the range.

We recommend for indoor applications that LED driver placements should be no further apart than 1.5m.

2. Each LED driver(one or more) in a different zone, like zone 1, 2, 3 or 4.

Dual color control

WW=Warm white LED

CW=Cool white LED

Each channel can supply up to 75W and white balance can be controlled as such:

Color temperature	Cool white	Neutral white	Warm white
Power distribution	WW=0W, CW=75W	WW=36W, CW=36W	WW=75W, CW=0W
